

PATIENTREV™

A PFS Group Affiliate Company

The most robust end to end healthcare payment portal

The PatientRev™ Difference

We leverage smart, easy to deploy cloud technology to give healthcare providers the tools to securely collect patient payments across their system.

PatientRev™ was developed by PFS Group, the leading patient account management firm operating in over 100 hospitals across the nation.

Reason

1

A unified multi-channel experience across your organization

Take payments from any channel across your network — hospitals, physician groups, ambulatory services, card readers, online, mobile, and call centers. All payments and data are unified to enable clear communications, reconciliation, and reporting. From preservice to post, we are with you every step of the patient payment journey.

Reason

2

Leverage your existing technologies

Our unique integration methods are what makes all difference:

We interface directly with your patient access system for seamless workflow. Work with your existing credit card processor to help you save and avoid implementation delays.

Unlike other payment portals that require you to purchase costly new terminals, PatientRev™ interfaces directly with your existing EMV card readers.

With PatientRev™ you never have to worry about replacing existing hardware or merchant relationships.

Some of our integration and payment partners.

- Patient Balance Management
- Commercial and Government Insurance Management
- AR Conversion Projects
- PatientRev™ Online Billing and Payment Solution

Reason

3

Rapid implementation and scalable

Our **cloud based solution** allows you to deploy across your organization in days and as your system grows, we dynamically scale our application to meet your changing demand.

We leverage our technology to connect every patient payment in order to enhance the patient experience and help you be efficient.

Our three step implementation process (configuration, training, go live) has minimal impact on your current workflow.

Reason

4

Clear reporting and guaranteed reconciliation

Reconcile, research, and obtain summary or detail reports pertaining to payment transactions on both a real-time and historical basis across your entire system and payment channels.

PatientRev™ offers multiple posting options based on your format and specifications.

Guaranteed reconciliation so that your transactions match your bank deposits.

Reason

5

Prioritize security

Point to Point encryption. Tokenization. **Managing the risk associated with transmitting sensitive patient and cardholder data is one of the most significant challenges of transaction processing.**

PatientRev provides comprehensive risk management and security. Our application is compliant with both the Health Insurance Portability and Accountability Act (HIPAA) and the Payment Card Industry Data Security Standards (PCI DSS), endorsed by Visa, MasterCard, American Express, Discover, and JCB card brands.

Reason

6

Actionable data and analytics

PatientRev™ gathers patient data, such as billing history, engagement level on different communication methods, and demographic information. It then uses this data and machine learning to give providers a smart billing solution with improved methods of communication and payment in order to engage patients. This also allows us to create dynamic pricing models for our revenue cycle services with upside to your bottom line.
